PROFILE

On building things that actually ship.

I design and build AI-powered systems that live inside real enterprise environments, not demos or playgrounds. For the past 7 years at **BCA Syariah**, I've owned features end-to-end, from ambiguous requirements through design, implementation, and the ongoing reality of maintaining software that others depend on.

My day job is AI Engineering: **agentic systems**, **RAG pipelines**, **LLM integrations**, grounded by deep roots in core banking and full-stack delivery. A rare combination where I know both the new stack and the legacy one.

Lately I've been remodeling **LISA**, the bank's machine learning system, and leading broader AI initiatives. Outside work I build constantly: agentic sprint planners, AI trading analysis, generative media tooling. Always learning, always shipping.

I care about code that is **maintainable, honest, and useful**. Available for freelance and collaboration with teams that value clarity over theatre.

7+ YEARS ENTERPRISE	20+ SYSTEMS SHIPPED	10+ AI PROJECTS BUILT	∞ STILL CURIOUS
------------------------	------------------------	--------------------------	--------------------

EXPERIENCE

Seven years, one bank.

2025 / Present	AI Engineer / Fullstack Developer - Designated lead for the bank's AI transformation initiatives: agentic workflows, RAG-based document intelligence, and LLM-powered automation embedded in production banking systems. - Currently remodeling LISA, the internal machine learning system, to modernize its architecture and improve predictive accuracy. - Architected a Smart Recruitment Platform with AI-driven CV screening, candidate scoring, and a conversational AI interviewer, now used internally for hiring. - Continuously integrating LLM APIs and RAG pipelines into existing enterprise workflows for intelligent decision-support.
2021 / 2024	Senior Fullstack Developer / Core Banking - Contributed to the Core Banking team with deep exposure to financial transaction systems, account management, and cross-system data consistency at enterprise scale. - Delivered a Suspicious Transaction Monitoring system integrated with BI-FAST flows, strengthening compliance and anti-fraud posture. - Built the internal Financing Application System end-to-end; owned backend services and REST APIs across multiple enterprise applications.
2018 / 2020	Junior Fullstack Developer Foundational enterprise SDLC experience: backend and frontend development across internal applications, code review practices, and production deployment workflows.

Selected works.

01

AGENTIC AI

Agentic Sprint Planner & Flow Diagram Maker

A multi-agent system that ingests product requirements and autonomously generates complete sprint plans alongside visual workflow diagrams. Reduces planning overhead for engineering teams from hours to minutes.

Stack Next.js · Python · Agent Orchestration · LLM APIs

02

FINANCIAL AI

AI Market Analysis for Trading

An intelligent market-analysis engine combining real-time financial data with LLM reasoning to deliver narrative trading insights tailored to user strategy. Multiple data sources unified into one coherent analysis layer.

Stack LLM Agents · RAG · Financial APIs · Real-time Pipelines

03

GENERATIVE AI

AI Image & Video Generator

End-to-end media generation platform orchestrating multiple generative AI models. Handles prompt refinement, output optimization, and downstream delivery, built for creators and marketing use-cases.

Stack Next.js · Generative Model APIs · Queue Workers

04

ENTERPRISE AI

Smart Recruitment Platform

Agentic AI recruitment suite featuring automated CV parsing, candidate scoring, and a conversational AI interviewer. Deployed internally at BCA Syariah to streamline hiring.

Stack Agentic AI · RAG · Next.js · Go

05

BANKING / COMPLIANCE

Suspicious Transaction Monitoring

Real-time monitoring platform integrated with BI-FAST transaction flows, identifying and triaging suspicious activity to support the bank's regulatory compliance obligations.

Stack Go · PostgreSQL · Kafka · Enterprise Integration

TOOLKIT

What I use.

AI / ML

intelligence.

- Agentic AI Systems
- RAG Pipelines
- LLM API Integration
- Agent Orchestration
- ML Model Remodeling
- Generative AI

LANGUAGES

syntax.

- Go (Golang)
- JavaScript / TypeScript
- Node.js
- Python
- PHP
- SQL

STACK

fullstack.

- Next.js · React
- REST API Design
- System Integration
- PostgreSQL · MySQL
- SQL Server
- Kafka · Pipelines

DOMAIN

banking.

- Core Banking Systems
- BI-FAST Payment Rails
- Compliance Monitoring
- Enterprise Integration
- Thought Machine Vault
- HSM / AWS Fundamentals

FORMATION

Education & craft.

2018
Bachelor of Technology
STTI NIIT I-Tech, Jakarta

2016
High School Diploma
CCIT Fakultas Teknik, Universitas Indonesia, Depok

2025
GitHub Copilot Certification
Jakarta

2021 / 2022
Thought Machine Vault, AWS Secure Cloud, RPA,
HSM, Scrum
PT Bank BCA Syariah
